C.Difficile

Calculating Rates

The C. difficile infection rate is calculated as a rate per 1,000 patient days. The "total patient days" represents the sum of the number of days during which services were provided to all inpatients during the given time period.

The rate is calculated as follows:

Number of new hospital-acquired cases of C. difficile in our facility x 1000
Total number of patient days (for one month)
